

Off camera flash – controls shadows better, can be closer to the subject and better at modifying light.

Flashes are going more the way of off camera and not being controlled by on camera flash but instead using radio frequencies.

High speed sync allows you to shoot at faster shutter speeds which helps darken ambient /background lighting. Rapidly decrease amount of power output by flash. Can use ND filter to take shutter speed back down.

Rear sync – flash fires at end of exposure

Front Curtain sync – flash fires at beginning of exposure

Flash Accessories

- Pocket wizards are going away
- Radio transmitter and receivers – best to use the same brand as your flash for best control.

Flash modifiers

- On flash itself
- Soft box
- Umbrella
- Beauty dish

There are now flash tripods with adjustable legs that help insure the flash stays level.

Most triggers are switching to Bluetooth wireless remote. Blue tooth is much less power draw than WIFI.

Ideas for future meetings

- Cropping
- Adventure/Travel
- Join Sherburne Refuge club for more events
- Wildlife Photographhy
- Kevin Juliot volunteered to present on Photography deals – where do you find them (April or later)
- Headshots
